

LD on (linear, c=0.5), VBM speed target $\varepsilon_{rel} = 10^{-4}$

current V2 adaptive: flux_adaptive_integrate body only; topology prebuilt; value-converged 3608/3608 (100.0%), map keeps finite positive V2 outputs; hatched cells contain at least one non-converged value

Grey cells: fewer than 8 converged mapped points. Error uses value-converged V2 values against the existing VBM RelTol=1e-6 reference; hatching marks incomplete value coverage.
