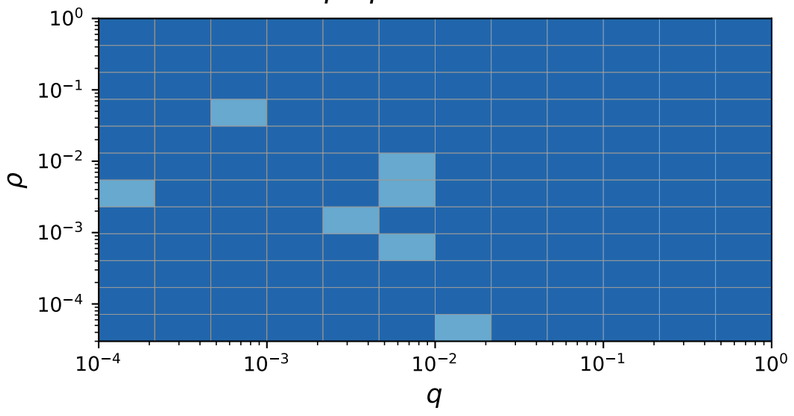
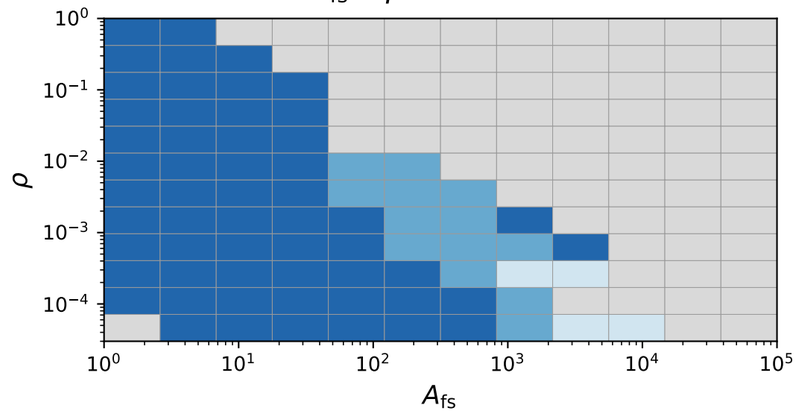
LD off (uniform), V2 full-cold whole epoch vs VBM, target $\varepsilon_{rel} = 10^{-4}$

V2 full-cold: D14/topology included; top uses VBM selected timing / V2 whole-epoch timing; value-converged 3608/3608 (100.0%)

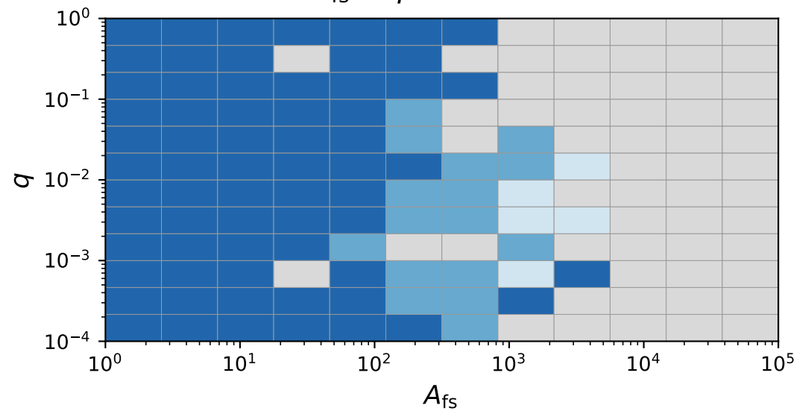
$q \times \rho$ — runtime

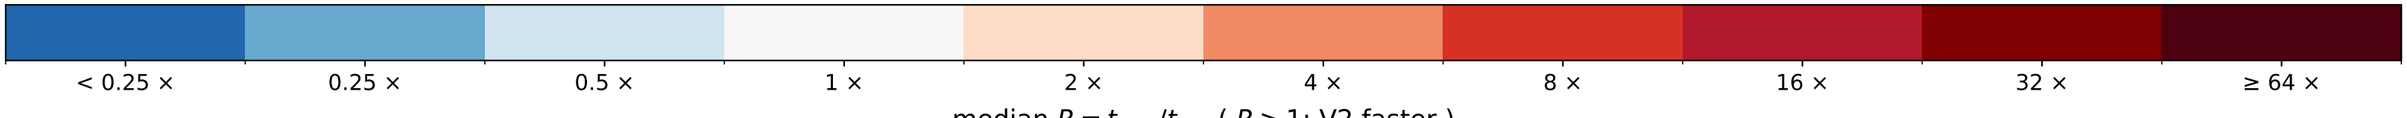


$A_{fs} \times \rho$ — runtime



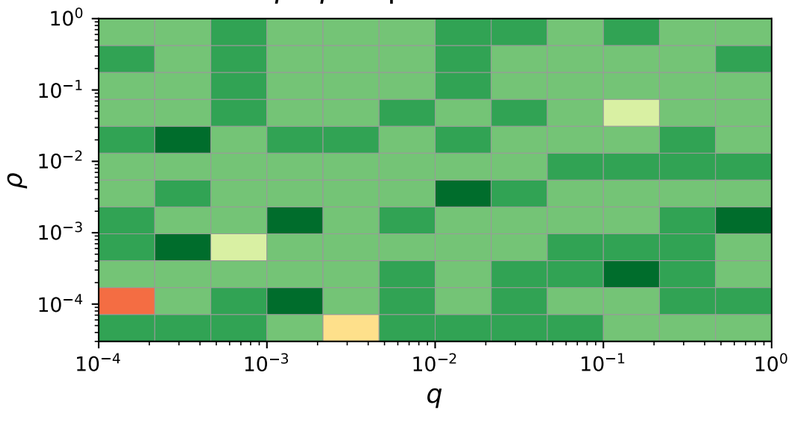
$A_{fs} \times q$ — runtime



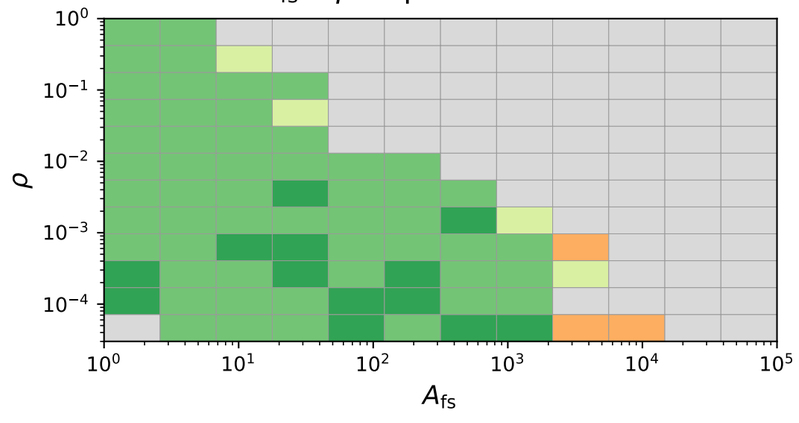


median $R = t_{VBM}/t_{V2}$ ($R > 1$: V2 faster)

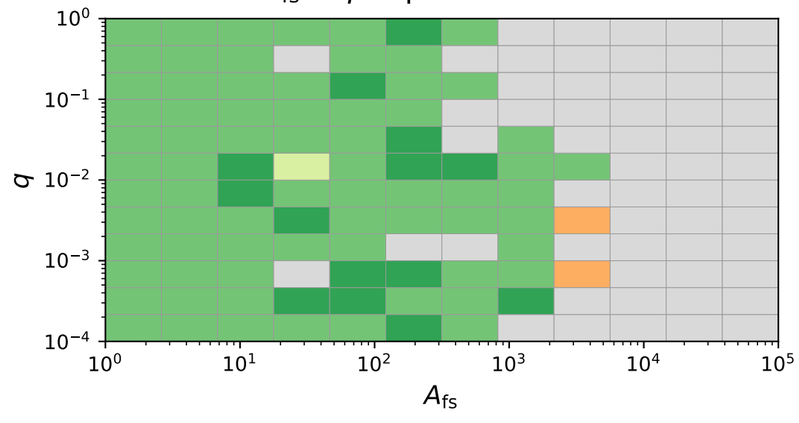
$q \times \rho$ — p95 difference

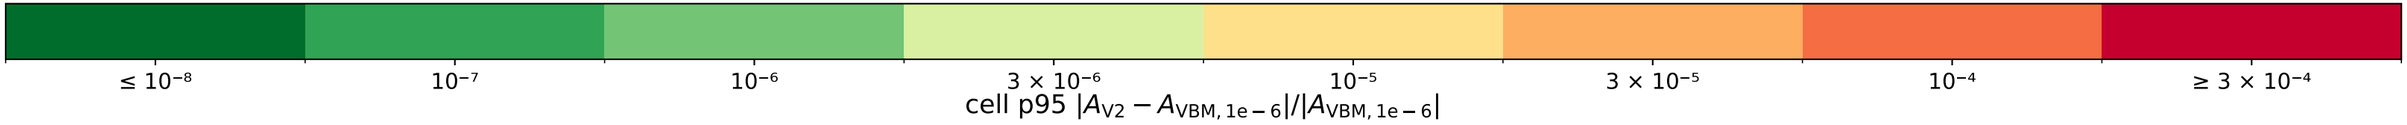


$A_{fs} \times \rho$ — p95 difference



$A_{fs} \times q$ — p95 difference





Grey cells: fewer than 8 rows. Error uses value-converged V2 values against the existing VBM RelTol=1e-6 reference; hatching marks incomplete value coverage.
